

things to do in
recognizing
 and
responding
 to an
opiate/heroin
overdose
 using
naloxone

fold

naloxone:

is **not** a *Scheduled Drug* – it has no potential for abuse

can cause withdrawal in a person with a habit

withdrawal can harm someone

more than one shot may be needed to stop overdose

overdose may return when naloxone wears off (about one hour)

is also called Narcan®

is a pure antidote to opiates including heroin – it reverses the effects of heroin for about an hour

does not eliminate heroin

has no effects of its own using it without having opiates in you is like injecting water.

fold

about

Naloxone is a medication prescribed for the reversal of opiate intoxication. The person possessing naloxone has been trained in its safe usage and has demonstrated competency in managing opiate/heroin overdose situations.

This program is designed to reduce the nearly 500 opiate-related overdose deaths in Chicagoland each year. Your cooperation is appreciated.

things to do with an **opiate/heroin overdose**

Stimulation

can they be awakened?

Call for help

if the person is not responsive

Airway

make sure nothing is inside the person's mouth stopping the breathing.

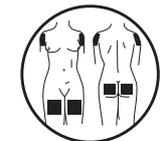

Rescue breathing

breathe for them – two quick breaths every five seconds

Evaluate

are they any better? can you get **naloxone** and prepare it quick enough that they won't go for too long without your breathing assistance?

Muscular injection

inject 1cc of naloxone into a muscle

Evaluate+support

Is the person breathing on their own?
 Is another dose of naloxone needed?
 Naloxone wears off in 30-90 minutes.
 Seek help and comfort him/her so he/she will not use any more drug until the naloxone wears off.
